

# KLINGER TOPLINE K4311

Aramid & PTFE Yarn Hybrid Packing

TopLine hybrid packing that combines the properties of Aramid and PTFE resulting in an excellent dynamic packing for rotary and reciprocating duties.

K4311 is manufactured from a combination of aramid and PTFE yarns using the Klingerlock braiding technique. The result is a packing with high resistance to extrusion that will operate at high peripheral speeds.

Klinger TopLine packing range has been selected to provide users with gland sealing products that meet today's demanding services, offering effective and trouble-free sealing during application. To achieve this goal we have selected the best materials and the best production methods.

## GENERAL PROPERTIES

- » Suitable for water, oil, solvents, and weak acids and alkalis.
- » The PTFE element, which is K4311's running surface, is soft and forgiving. Shaft wear is therefore kept to a minimum.
- » The strong aramid corner posts resist extrusion from the stuffing box while ensuring that unwanted particles are excluded. This reduces the detrimental effects of abrasive and viscous media.
